- This indicator shows how much a fund has risen and fallen in the past, and therefore how much a fund's returns have varied. It is a measure of a fund's volatility. The higher a fund's past volatility the higher the number on the scale and the greater the risk that investors in that fund may have made losses as well as gains. The lowest number on the scale does not mean that a fund is risk free.
- The fund has been classed as 4 because its volatility has been measured as average.
- This indicator is based on historical data and may not be a reliable indication of the future risk profile of this fund.

- The risk and reward profile shown is not guaranteed to remain the same and may shift over time.
- Currency Risk: As the fund invests in global securities and collectives investment schemes that invest in global securities, movements in exchange rates may, when not hedged, cause the value of your investment to increase or decrease.
- Some of the collective investment schemes held by the fund invest in corporate and government debt securities. Such securities are affected by trends in interest rates and inflation. If interest rates go up the value of security may fall and vice versa. Inflation will also decrease its real value. The value of a security is also affected by its credit rating. All of which may have an effect on the value of the collective investment schemes held by the fund.
